

## Water Filtration System for 5896 S Panorama

All the exact information about the model numbers and make of each piece of the purification system are in a file at the cabin. It was installed and maintained by Culligan.

Here is what it is:

Air injection (to help oxygenate all the minerals making the purification process easier) - no maintenance needed.

Brim (sand) filter bed (it is automatic recharged each week and needs no maintenance)

Water softener (periodic adding salt for maintenance is needed). The until recharges after 990 gallons of water have been processed or each month to prevent bead bed from settling.

5µm filter (replace each year, it was just replaced and there is an extra filter there)- there is a wrench and it is easy - or Culligan will do it as part of annual program.

UV sterilizer (with 1 year on the bulb that needs to be replaced each 2 years)- there is a wrench and it is easy - or Culligan will do it as part of annual program.
